Internet Explorer Optimization steps

For Internet Explorer 6:

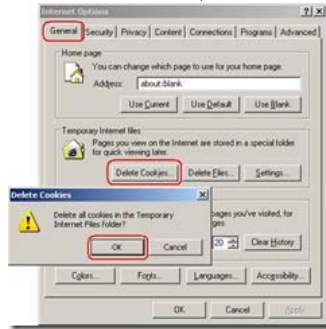

1. On your desktop, launch Internet Explorer.

2. On the "Tools" menu, click "Internet Options."

3. On the "General" tab, click "Delete Cookies," then click "OK," if prompted.

4. Click "Clear History," then click "Yes."

5. Click "Delete Files," select the "Delete all offline content" check box, and then click "OK."

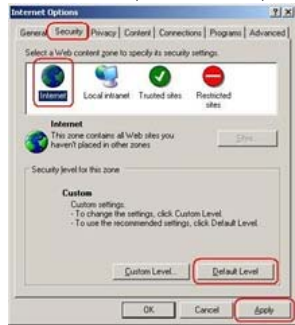

6. Click "Settings," under "Check for newer versions of stored pages", select "Every visit to the page."

7. Click "View Files," press CTRL+A to select all the files, and then press "DELETE." When you are prompted to confirm, click "yes," close the window and click "OK" to close the Settings dialog box. If there are no files in the window, close it and click "OK" to close the Settings dialog box.

8. Click the "Security" tab, click the "Internet," select "Default Level", if it is available, and then click "Apply." Repeat this step for the "Restricted sites," "Trusted sites," and "Local intranet" zones.

9. Click the "Restricted sites" icon, click "Sites," select a listed site (if there are any), and then click "Remove." Repeat this step until all the sites are removed from the list. Click "OK" when you are finished.

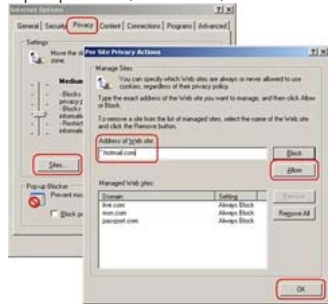

10. Click the "Trusted sites" icon, click "Sites," Uncheck the "Require server verification (https:) for all sites in this zone" checkbox.

11. In the "Add this Web site to the zone box," type *.hotmail.com , and then click the "Add" button. Do the same for *.passport.com, *.live.com, and *.msn.com, and then click "OK." You will know that you successfully added the sites because you will see the sites in the Web sites box. If you receive a "Trusted sites" error message, verify the spelling of your entry.

12. On the "Privacy" tab, click "Sites" or "Edit." Under Address of Web site, type *.hotmail.com, and then click "Allow." Do the same for *.passport.com, *.live.com, and *.msn.com. Click "OK."

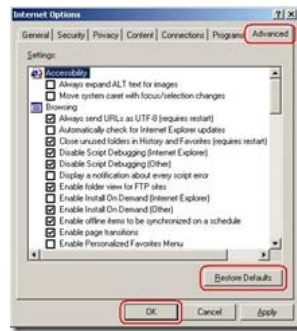

13. On the "Content" tab, click "Clear SSL State," then click "OK." Skip this step if "Clear SSL State" is unavailable.

14. Click the "Advanced" tab, click "Restore Defaults," and then click "Apply."

15. Click "OK" to close "Internet Options."

For Windows Explorer 7:

1. On your desktop, launch Internet Explorer.

2. On the "Tools" menu, click "Internet Options."

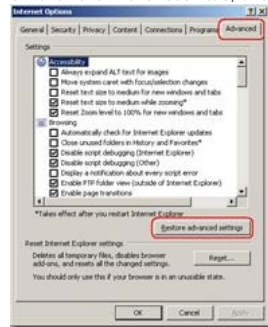

3. Under Browsing history, click "Delete."

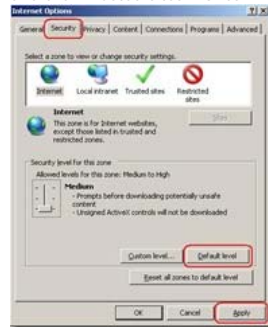

4. In the Delete Browsing History window, click "Delete cookies." If you are prompted to confirm the deletion, click "Yes." It may take several minutes to delete these files if you have a lot of files, then click "Close."

5. Click the "Advanced" tab, and then click "Restore Advanced settings."

6. Click the "Security" tab, click the Internet icon, click "Default Level," and then click "Apply." Repeat this step for the "Restricted sites" and the "Trusted sites" zones.

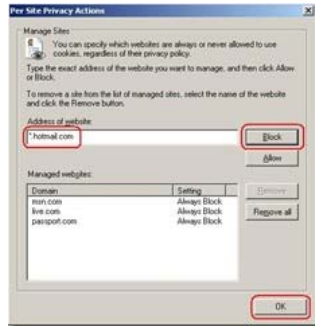

7. Click the "Trusted sites" icon, click "Sites," and uncheck the "Require server verification (https:) for all sites in this zone" checkbox.

8. Under "Add this Web site to the zone", type *.hotmail.com, and then click "Add." Do the same for *.passport.com, *.live.com, and *.msn.com. Click "Close."

9. Click the "Privacy" tab, and then click "Sites." Under Address of Web site, type *.hotmail.com, and then click "Allow." Do the same for *.passport.com, *.live.com, and *.msn.com. Click "OK."

10. Click the "Content" tab, click "Clear SSL State." Skip this step if "Clear SSL State" is unavailable.

11. Click "OK."

Hotmail issues solved!__The STUPID message on the bottom left hand corner~"Working on your request". IS FINALLY GONE !!!

Select the "Try the full version ..." on the bottom of the Classic Hotmail window the problem goes away.__
-Best wishes

Recently after this "Windows Live" update went into effect, I cannot click on links within the email messages that I receive. I'm running IE 6 SP2 on Win XP

I can click the links using Netscape 8 so I know that the email messages are configured correctly but I only have Netscape to test different things with.

I added the sender's address to both my allowed recipient list and my allowed newsletter list but it's still not working.

It's interesting that this is an incompatibility between a MS web page and a MS product...

Same problems as everyone else. No help from Microsoft Hotmail. Checking files to be deleted, etc., didn't work until I went out and came back in. Then I discovered that by clicking on "Today" they would disappear. Still have to log out and log back in for everything else to work. Hotmail live has become a huge pain to use.

Using other email clients now because there is no way I'll give up Norton 360.

If you want proof that the powers that be never check this message board....it's right here. We're in August now and despite trying all or most suggestions....the problem is still the same. Disgraceful.

Was unable to open messages (javascript error). Just completed the "add sites to trusted zone" and "allow cookies" and it worked! Using IE6 on Windows 2000 SP4.

I was not paying attention with this conversion to "hotmail live" I can no longer access my former emails or contacts with this new version? I have aq Iso emailed I think Microsoft and have not received any communication. This is pretty poor at this time, any suggestions on how I can retrieve my contacts and old emails?

I tried everything suggested, but since 7/1 2008 i could not open my Hotmail, or deleat anything, either it took so long, or it wouldnt open,until i turned of the norton firewall. I do not feel save doing this,but had no choice.downloaded windows

live so i could at least read my e-mails. without getting upset.This is all of a sudden .Goioing to check with norton to see, because i think it,s a problem from their sit

Champagneblonde escribió:

I have the same problem since early July, it takes ages for me to read an email. and always that yellow box "working on your request", deleting emails and/or trying to open another folder takes ages, i have to close the window and open again to be able to read one email , close and open again to delete it after and/or open another folder like junk mail, or drafts, etc. i contacted hotmail staff and they suggested the same thing. i did everything they said and still no working. i then disabled norton like a few people said here and then works fine. but there is no way that im going to have norton disabled for to long. so hotmail must have done something new that stuffed up the customers. i changed back the settings to the way they were before because the way hotmail staff told me to change it didnt allow me to go into my hotmail at all....dont know what are we going to to next..

anybody out there, found a solution to this problem that can share with me, please?

Any help offered from hotmial support has been useless. I have to use my yahoo accounts so I can actually have access to all my emails. Hotmail has become the untimate in sensoring what they deem may be important and safe for viewing.

I can't believe they are being so slack in finding a solution to this problem. I know it isn't caused by anything I've done. So far I have been offered three differing sorts of advice after sending a message via accounts services, and as for turning of Norton....forget it ! Love my new yahoo account!

I turned off my Norton Security and it worked well. I could look at all my earlier emails. I would like to thank everyone for their suggestions.
